

## FUEL DRAIN

A fuel drain is provided to drain the carburetor and fuel tank for storage or transport. The fuel drain is opened by turning the carburetor drain screw ② counterclockwise.

With the fuel valve ① at RES and the fuel vent valve ON the fuel tank and carburetor will drain. If the fuel valve ① is OFF, only the carburetor will drain.

When draining, put the lower end of the carburetor drain tube ③ into a suitable gasoline container.

Before refilling the fuel tank, close the fuel drain by turning the carburetor fuel drain screw clockwise until tight.
