

Engine Oil Recommendation

Use only high detergent, premium quality motor oil certified to meet or exceed US automobile manufacturer's requirements for Service Classification SE.

Motor oils intended for Service SE will show this designation on the container. The regular use of special oil additives is unnecessary and will only increase operating expenses.

Engine oil should be changed at the intervals prescribed in the Maintenance Schedule on page 38.

CAUTION: Engine oil is a major factor affecting the performance and service life of the engine. Non-detergent and low quality oils are specifically not recommended.

Viscosity:

Viscosity selection should be based on the average atmospheric temperature in your riding area. Change to the proper viscosity

oil whenever changes in average atmospheric temperature require it.

- Recommended oil viscosity:

General, all temperatures

SAE 10W-40

- Alternate:

Above 59°F	SAE 30
32 to 59°F	SAE 20 or 20W
Below 32°F	SAE 10W

Final Drive Gear Oil Recommendation

Use only gear lubricants conforming to A.P.I. designation GL-5 of the following viscosity.

Above 41°F (5°C) SAE 90

Below 41°F (5°C) SAE 80

The GL-5 designation should appear on the oil container.
