

### **Finishing Touches**

After washing your scooter, consider using a commercially-available spray cleaner/polish or quality liquid or paste wax to finish the job. Use only a non-abrasive polish or wax made specifically for motorcycles or automobiles. Apply the polish or wax according to the instructions on the container.

### **Removing Road Salt**

Road Salt used on roads during winter and salt from seawater causes rust.

Wash your scooter as follows after it has run through salty water or on roads treated with Road Salt.

1. Clean the scooter using cool water (page 184 ).

Do not use warm water.

This worsens the effect of the salt.

2. Dry the scooter and the surface of the metal is protected with the wax.
