

choke valve to the full open position and then crank the engine several times with the kick starter, holding the throttle grip turned fully inward. Next, position the main switch to on and then follow the normal starting procedure.

Starting in Extreme Cold Weather :

Prime the engine before starting by cranking the engine several times with the main switch off. The choke should be fully closed and the throttle opened. Follow with the procedure for starting a cold engine.

.....

6. After the engine starts, operate for 2~3 minutes at medium speed to warm up the engine.
7. When the engine is warm, place the choke lever in the open position.

Starting a Warm Engine : When the engine is to be restarted while it is still warm proceed as for a cold engine, however, the use of the choke is not necessary.

||||| RIDING THE MOTORCYCLE |||||

1. After the engine has been warmed up, the motorcycle is ready for riding.
2. Return the throttle grip to the idling position and depress the rear end of the gear change pedal to shift into low (1 st) gear.
