

**WARNING**

- \* *Maintain proper tire air pressure. Improperly inflated tires may adversely affect maneuverability and may cause loss of control.*

If you have a flat tire, use the plug method to make temporary repairs. The plug method is the same as that for conventional tubeless tires. A plug type repair kit, which is available at most auto part stores or service stations, provides a plug, an installation tool, tire cement, and an instruction sheet. Follow the instructions provided in the repair kit to make a temporary repair until the tire can be permanently repaired by the cold patch method. Any tire which cannot be repaired by the plug method should be replaced.

Whenever the FOUR TRAX is to be operated far from service facilities or available transportation, we recommend that the rider carry a tire pump and a suitable repair kit with the FOUR TRAX.

**BATTERY**

It is not necessary to check battery electrolyte level or add distilled water as the battery is a sealed type. If any loss of electrolyte is experienced or if your battery seems to be weak, causing slow starting or other electrical troubles, see your authorized Honda dealer.

**CAUTION**

- \* *Do not attempt to remove the caps from the cells.*
- \* *When the FOUR TRAX is to be stored for an extended period of time, remove the battery from the vehicle and charge it fully. Then store it in a cool, dry place. If the battery is to be left on the vehicle, disconnect the negative cable from the battery terminal.*

**WARNING**

- \* *Keep away from open flames or sparks when handling a battery.*
