## If You Have a Flat Tire

## Installation

- 1. Position the wheel.
- 2. Position the wheel nuts so that the tapered sides face the wheel rim (2).
- 3. Tighten the wheel nuts in a crisscross (rather than a circular) pattern to the specified torque:
  - 47 lbf-ft (64 N·m, 6.5 kgf·m)

If a torque wrench was not used for installation, see your Honda dealer as soon as possible to verify proper assembly. Improper assembly may lead to loss of braking capability.
