

RIDING

For your initial riding practice, select a safe area free of obstacles with a level surface of dirt or sand.

⚠ WARNING

POTENTIAL HAZARD

Running the engine in an enclosed area.

WHAT CAN HAPPEN

Engine exhaust contains carbon monoxide gas that can cause loss of consciousness and may lead to death.

HOW TO AVOID THE HAZARD

Never operate the ATV engine in an enclosed area, such as a garage.

Practice with the throttle limiter adjusted as delivered until you are confident in shifting gears, braking, and making turns.

Speed Restrictors For New Riders

To limit top speed to about one half of normal in every gear, your Sportrax has an adjustable throttle limiter and air intake restrictor.

The screw and locknut in the lower throttle housing can be adjusted to limit throttle lever movement. The air intake restrictor is used to restrict air flow to the engine which reduces engine power.
