

Check the tires for cuts, imbedded nails or other sharp objects. Check the rims for dents or deformation. If there is any damage, see your authorized Honda dealer for repair, replacement, and balancing.

WARNING:

- **Improper tire inflation will cause abnormal tread wear and create a safety hazard. Underinflation may result in the tire slipping on, or coming off of the rim.**
- **Operation with excessively worn tires is hazardous and will adversely affect traction and handling.**

Replace tires before tread depth at the center of the tire reaches the following limit:

Minimum tread depth	
Front:	1.5 mm (1/16 in)
Rear:	2.0 mm (3/32 in)

Repair:

- **Puncture of tubeless tires may be fixed externally for emergency. See your authorized Honda Dealer for the correct method before you encounter actual failure on the road.**

WARNING:

- **Do not exceed 60 km/h (40 mph) for the first 24 hours after the repair carried out, otherwise repair failure or tyre deflation may result.**
- **It is important, after a repair has been carried out to the tyres, to pay special attention when riding at high speed as the tyre performance may deteriorate.**
- **If you wish to have temporary repair or you have any doubt regarding a repair, please consult HONDA dealers or your local tubeless tyre specialist.**
