

Rear Shock Absorber

The rear shock absorber ① has five settings for different riding conditions. Position (III) is standard setting. Adjustment is performed by using the pin wrench ② contained in the tool kit. Turning the adjuster ③ in direction A softens the rear suspension, turning it in direction B stiffens the rear suspension.

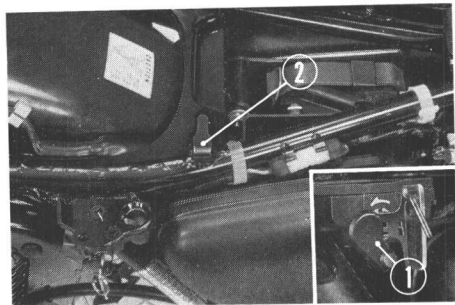

- ① Rear shock absorber
- ② Pin wrench
- ③ Adjuster

Seat Lock and Helmet Holder

The seat lock ① is located on the lower right side of the seat. Insert the main switch key and turn it counterclockwise 90° to unlock and raise the seat.

The helmet holder ② is located under the seat. Hang the helmet on the hook and lock the seat.

- ① Seat lock
- ② Helmet holder
