# Suspension

## Front Suspension Adjustment

The front suspension can be adjusted for the rider's weight and riding conditions by changing the oil volume and the rebound and compression damping. Use the following chart to determine the correct adjustment for you.

Condition	Oil Volume	Rebound Damp.	Comp. Damp.
Entire range of travel is too hard.	—	softer	softer
Entire range of travel is too soft (bottoming).	—	stiffer	stiffer
Initial travel is good, but the final stages of travel are too soft (bottoming).	increase	—	—
The initial stages of travel are good, but the final stages are hard.	reduce	—	—
The initial stages of travel are too soft, but the final stages are good.	reduce	stiffer	stiffer
The initial stages of travel are too hard, but the final stages are good.	increase	softer	softer
