

Catalytic converter

This motorcycle is equipped with a three-way catalytic converter. The catalytic converter contains precious metals that serve as catalysts in the high-temperature chemical reactions that convert the hydrocarbons (HC), carbon monoxide (CO) and nitrogen oxides (NOx) in the engine exhaust into safe compounds.

A defective catalytic converter contributes to air pollution, and can impair your engine's performance. A replacement unit must be an original Montesa part or its equivalent.

Follow these recommendations to protect your motorcycle's catalytic converter.

- Always use unleaded petrol. Petrol containing lead will damage the catalytic converter.
- Keep the engine in good operating condition.
- If you observe that your motorcycle engine experiences ignition malfunctions, sputters, stalls or otherwise does not operate properly, stop, turn off the engine and have the motorcycle inspected.
