

6. Apply a coat of wax to prevent corrosion.
  - U Avoid products that contain harsh detergents or chemical solvents. These products can damage metal parts, as well as the paint and plastic on your motorcycle.
  - Keep the wax away from tyres and brakes.
  - U If your motorcycle has parts with matte paint, do not apply wax to the surfaces with matte paint.

### I Precautions during cleaning

Follow these indications during cleaning:

- Do not use high-pressure machines to clean your motorcycle.
  - U High-pressure water cleaners can damage moving and electrical parts, rendering them inoperable.
- Do not aim water directly at the silencer:
  - U Water in the muffler can prevent the motorcycle from starting and cause the silencer itself to rust.

- Dry the brakes:
  - U Water impairs braking effectiveness. After washing, intermittently apply the brakes at a slow speed to help dry them.
- Do not aim water under the seat:
  - U If water enters the compartment under the seat, it could damage documents and other belongings.
- Do not aim water at the air cleaner:
  - U If water enters the air cleaner, it can prevent the engine from starting.
- Do not aim water under the front headlight:
  - U Any condensation inside the front headlight should dissipate once the engine has been running for a few minutes.
- Do not use compounds containing wax on painted surfaces with a matte finish:
  - U Using plenty of water, clean painted surfaces with a matte finish with a soft cloth or a sponge. Dry with a soft, clean cloth.
  - U Use a neutral detergent to clean matte painted surfaces.
