

If you are involved in an accident

Personal safety is your priority. If you or anyone else has been injured, take time to assess the severity of the injuries and whether it is safe to continue riding. Request emergency assistance, if necessary. Also follow applicable laws and regulations if another person or vehicle is involved in the accident.

If you decide to continue riding, assess the condition of your motorcycle. If the engine is still running, turn it off. Check for any leaks, make sure critical nuts and bolts are tightened and check the handlebars, levers, controls, brakes and wheels. Ride slowly and cautiously.

The motorcycle may have suffered damage that is not immediately noticeable. Have your motorcycle carefully inspected at a qualified garage as soon as possible.

Hazard of carbon monoxide poisoning

The exhaust contains carbon monoxide, a poisonous gas that is both colourless and odourless. Breathing carbon monoxide can cause the loss of consciousness and be lethal.

If you start the engine in a small, enclosed space, even if only partially enclosed, the air you breathe could contain a hazardous amount of carbon dioxide. Never start the motorcycle inside a garage or another enclosed space.

WARNING

Carbon monoxide is poisonous. If breathed, it can lead to loss of consciousness and even kill you.

Avoid areas or activities that expose you to carbon dioxide.
